PROFESSIONAL SUMMARY

Full Stack Software Developer with **3+ years** of experience building scalable web applications using JavaScript, React, PHP, and MySQL. Focused on performance, system design, and security-aware development. Focused on performance optimization, system design, and security-aware development.

SKILLS

- Languages & Frameworks: JavaScript (React.js, Node.js), PHP, MySQL
- Tools & Platforms: AWS, Docker, Git, Linux, Tailwind CSS, Jest.
- Security & Auth: JWT, OAuth2, IAM fundamentals.

EMPLOYMENT HISTORY

Valorant Fantasy League, Remote
Full Stack Developer — Mar 2025 – Present

- Achieved 90%+ test coverage across unit and integration tests, reducing critical bugs by ~80%.
- Reduced frontend memory usage by ~30% through optimized component state management.
- Supported 10,000+ concurrent users during beta deployment.
- Improved page load time by 4+ seconds through optimized pagination and data handling.
- Secured the application by implementing input sanitization, closing 3 reported XSS vulnerabilities.

The Beat Revival Project, Remote
Full Stack Developer — Dec 2024 – Present

- Reverse engineered network and authentication flows to reconstruct session logic, enabling continued development after server shutdown.
- Analyzed authentication request patterns to identify session validation inconsistencies, informing the Discord OAuth2 implementation.
- Implemented Discord OAuth2 authentication, replacing unstable libraries and improving reliability for **70+ closed alpha users.**
- Built a Windows-based authentication client (BeatLink) handling OAuth2 flows and memory patching, supporting 70+ alpha users during closed testing.
- Launched **public beta** during 10-year MEC anniversary, scaling to **1,000+ users on day one** with no reported performance degradations during the 24-hour launch window.

InsulPlant, Remote
Full Stack Developer — Jun 2024 – Jan 2025

- Increased automated test coverage from 5% to 90%, improving stability in frontend feature development.
- Decreased frontend load time by 60% to enable real-time responsiveness on heavy database tables.
- Built bulk action processing **10,000+** report entries per batch, eliminating manual per-item handling.
- Refactored monolithic database interactions into modular, testable units.
- Led redesign of monolithic code files, improving maintainability and development speed.
- Developed comprehensive API documentation to reduce onboarding time and support queries.

CERTIFICATIONS

Google Cybersecurity Professional Certificate — June 2026

- Gained hands-on experience with Linux, SQL, Python, network security, incident response, threat detection

CompTIA Security+ 701 Training Course (Infosys/Coursera) — July 2026

- Security fundamentals, network security, identity and access management (IAM), SIEM, and cloud security.

EDUCATION

Bachelor of Software Engineering — Carleton University, Ottawa — 2017 – 2023

LANGUAGES

English French
